

FARAN AHMAD

Software Engineer

☎ +92-3336534204 ✉ contactfaranahmad@gmail.com 🔗 linkedin.com/in/faran02 🐙 github.com/faranahmad123

Summary

Solutions-focused Software Engineer specializing in the intersection of development and operations. Leverages a strong foundation in frontend frameworks (React, Angular, Flutter) to architect seamless API integrations and optimize deployment pipelines. Passionate about building scalable, containerized infrastructure using Docker to streamline the software lifecycle from code to production.

Skills

Programming: JavaScript, TypeScript, Python, Dart
Frameworks & Libraries: React, Angular, Flutter, Flask, OpenCV
DevOps & Tools: Docker, Postman, Git/GitHub, Firebase
Concepts: RESTful API Integration, Containerization, State Management, OCR

Experience

Frontend Developer Intern

July 2025 – September 2025

Keyob, Lahore (Onsite)

Tools Used: React, JavaScript, Postman, Docker, Git

- Developed and maintained responsive user interfaces for various web applications using **React**, translating complex requirements into functional, scalable components.
- Configured and rigorously tested **RESTful API** endpoints using **Postman** to ensure seamless data synchronization and typing between frontend and backend systems.
- Gained hands-on DevOps experience by utilizing **Docker** to containerize application environments, ensuring reliable consistency across multiple development and testing stages.
- Collaborated in cross-functional agile teams using Git/GitHub for version control, participating in code reviews to uphold software quality standards.

Projects

Lifely (AI-Powered Telemedicine App) | Flutter, Flask, Firebase, Python, OCR

March 2026

- Developed a comprehensive cross-platform telemedicine application facilitating real-time doctor appointment scheduling and secure patient management using Cloud Firestore.
- Engineered a decoupled Python/Flask backend, configuring local server tunneling (Ngrok) to process asynchronous multipart API requests from the mobile client.
- Constructed an automated OCR pipeline utilizing OpenCV and Tesseract to accurately extract physiological biomarkers (CBC, LFT, Diabetes) from user-uploaded physical medical reports.
- Integrated predictive machine learning models (TabNet, CNN) within the server to evaluate extracted data and seamlessly return diagnostic risk scores to the mobile interface.

Enterprise Sales CRM Dashboard | Angular, TypeScript, Postman, Docker

May 2026

- Architected an inventory and commission-tracking single-page application using Angular, implementing complex reactive state management for real-time sales reporting.
- Verified and integrated RESTful API data flows using Postman to ensure strict data typing and seamless frontend-backend communication.
- Containerized the production build using Docker, demonstrating a modern DevOps-aligned deployment strategy.

Awards & Certifications

- **Runner-up Mobile App Competition – University of Lahore (2025):** Recognized for developing an innovative mobile solution under tight deadlines.
- **Introduction to Flutter Course – Simplilearn (2026):** Completed comprehensive training on widget trees, state management, and cross-platform deployment.
- **Advanced Prompt Engineering – Simplilearn (2026):** Acquired skills in optimizing AI interactions for development workflows.

Education

B.Sc. Software Engineering

University of Lahore, Sargodha Campus

Graduated: 2026

CGPA: 3.40 / 4.0
